DESCRIPTORS: *Radio waves, Propagation, Mathe-

receivers, Circuits

The passage of bell-shaped and rectangular radio
pulses through the selective circuit of a receiver at
different detunings between the radio pulse carrier fre-
quency and the tuned frequency of the selective circuit
is analyzed. Equations are obtained which permit the

Ways are found for determining the reliable measure-
ments of the surface roughness and the number of
measurements required under different conditions.
The adequacy of the recommendations have been con-
firmed by experimental investigation. (Author)
